

Vintage Optical Number Explainer

Internal-only. Human Project Room approval is required before external use.

Evidence-reviewed rebuild dated 2026-07-30. Public-only confidence grade: C. Rendered internal candidate.

This document explains every score, fact, arithmetic step, source ID, and boundary used in the one-page report. All score displays are higher = better except Competitive Pressure Index, where higher = more pressure.

Room to Win = 100 - Competitive Pressure Index

The approved manual bands are 20, 35, 50, 65, and 80. Each weighted score keeps its original weights, sums full-precision contributions, and uses one final ROUND_HALF_UP step. Unknown values stay null.

Market Demand-Supply: 61 / 100

Direction: Higher means better for the client.

Full precision: 16.25 + 10.00 + 9.75 + 9.75 + 9.75 + 5.00 = 60.50. One final ROUND_HALF_UP step produces 61.

Component	Band/value	Weight	Contribution	Source IDs	Confidence
Demand Strength	65	0.25	65 x 0.25 = 16.25	VALHALLA_20260730, TIGER2024_BG, ACS2024_BG	medium
Supply Balance	50	0.20	50 x 0.20 = 10.00	NPPES_CURRENT_20260730, CENSUS_GEOCODER_20260730, CATCHMENT_DEMOGRAPHICS_20260730	medium
Payer / Income Fit	65	0.15	65 x 0.15 = 9.75	ACS2024_BG	medium
Growth / Future Demand	65	0.15	65 x 0.15 = 9.75	CENSUS_PEP_2025, MORTON709_FIRST_PARTY_ARCHIVE	medium
Specialty Demand Load	65	0.15	65 x 0.15 = 9.75	ACS2024_BG, CDC_PLACES_2025, MORTON709_FIRST_PARTY_ARCHIVE	medium
Market Data Confidence	50	0.10	50 x 0.10 = 5.00	VALHALLA_20260730, TIGER2024_BG, ACS2024_BG, CDC_PLACES_2025, CENSUS_PEP_2025, MORTON709_FIRST_PARTY_ARCHIVE, NPPES_CURRENT_20260730	medium

The display changed from 57 to 61. Observed positive population and school-enrollment change moves Growth / Future Demand from 50 to 65. Complete fixed-window demographics move Market Data Confidence from 35 to 50. Demand Strength, Payer / Income Fit, and Specialty Demand Load remain at 65 because the new evidence confirms their supportive state but does not justify an 80 band. Supply Balance remains neutral 50 because canonical full VDU and canonical office count are still null.

Component	Why this band changed or stayed	Limitation
Demand Strength	All five windows now have population, household, and age-band estimates, but no benchmark or realized-demand evidence supports an 80 band.	Growth is observed village and district context, not a forecast. Supply balance, canonical VDU, payer mix, and realized demand remain unknown. The recommended 61 stays in the rubric's Mixed market range.
Supply Balance	The NPPES locations are coverage candidates only. Canonical office count and full VDU remain null, so no VDU-per-office state exists.	Growth is observed village and district context, not a forecast. Supply balance, canonical VDU, payer mix, and realized demand remain unknown. The recommended 61 stays in the rubric's Mixed market range.
Payer / Income Fit	The catchment packet supplies approximate income context but not actual payer mix. The existing supportive band is preserved.	Growth is observed village and district context, not a forecast. Supply balance, canonical VDU, payer mix, and realized demand remain unknown. The recommended 61 stays in the rubric's Mixed market range.
Growth / Future Demand	Two direct observed series show positive change. The evidence supports a directional growth proxy, not a forecast or top band.	Growth is observed village and district context, not a forecast. Supply balance, canonical VDU, payer mix, and realized demand remain unknown. The recommended 61 stays in the rubric's Mixed market range.
Specialty Demand Load	Exact catchment age bands, diabetes context, and enrollment growth strengthen the existing pediatric, senior, and chronic-care support but do not establish search, referral, or realized specialty demand.	Growth is observed village and district context, not a forecast. Supply balance, canonical VDU, payer mix, and realized demand remain unknown. The recommended 61 stays in the rubric's Mixed market range.
Market Data Confidence	Direct, recent demographic and growth evidence resolves major gaps, but incomplete supply, full VDU, provider dedupe, and patient choice keep the aggregate market evidence mixed.	Growth is observed village and district context, not a forecast. Supply balance, canonical VDU, payer mix, and realized demand remain unknown. The recommended 61 stays in the rubric's Mixed market range.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: Growth is observed village and district context, not a forecast. Supply balance, canonical VDU, payer mix, and realized demand remain unknown. The recommended 61 stays in the rubric's Mixed market range.

Competitive Pressure Index: 57 / 100

Direction: Higher means more competitive pressure; this is the internal diagnostic exception.

Full precision: 20.00 + 16.25 + 13.00 + 7.50 = 56.75. One final ROUND_HALF_UP step produces 57.

Component	Band/value	Weight	Contribution	Source IDs	Confidence
Supply Saturation	50	0.40	50 x 0.40 = 20.00	NPPES_CURRENT_20260730, CENSUS_GEOCODER_20260730	medium
Patient Choice Pressure	65	0.25	65 x 0.25 = 16.25	OSRM_FOCUS_GOOGLE_PINS_20260730, OSRM_TABLE_20260730	medium
Competitor Strength	65	0.20	65 x 0.20 = 13.00	GOOGLE_MAPS_FOCUS_SAMPLE_20260730, S07, S08, S09, S10, S11, S12	medium
Access / Differentiation Pressure	50	0.15	50 x 0.15 = 7.50	S02, S06, S07, S08, S11	medium

The display stays 57. The corrected Focus route preserves the nearby-peer state. NPPES candidate locations cannot change Supply Saturation or Patient Choice Pressure because the roster is incomplete and not a canonical office census. The direct Google comparison reinforces the existing competitor-strength direction but does not justify a new band.

Component	Why this band changed or stayed	Limitation
Supply Saturation	Canonical offices, provider entities, full VDU, and supply denominators remain null.	Canonical supply, patient-origin choice, complete peer reputation, live access, and live traffic remain unknown. The result remains in the High pressure band.
Patient Choice Pressure	Nearby routed alternatives remain directionally relevant, but candidate routes are not a complete, population-weighted patient-choice set.	Canonical supply, patient-origin choice, complete peer reputation, live access, and live traffic remain unknown. The result remains in the High pressure band.
Competitor Strength	Public service overlap and a bounded direct review comparison support a directional strength state, but not severe pressure or complete peer normalization.	Canonical supply, patient-origin choice, complete peer reputation, live access, and live traffic remain unknown. The result remains in the High pressure band.
Access / Differentiation Pressure	Published access and overlap remain mixed; live slots, conversion, and comparable peer friction are unmeasured.	Canonical supply, patient-origin choice, complete peer reputation, live access, and live traffic remain unknown. The result remains in the High pressure band.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: Canonical supply, patient-origin choice, complete peer reputation, live access, and live traffic remain unknown. The result remains in the High pressure band.

Room to Win: 43 / 100

Direction: Higher means more room to win; exact inverse of Competitive Pressure Index.

Room to Win = 100 - Competitive Pressure Index = 100 - 57 = 43. Full precision is 43.00. It is not assigned an independent manual band.

Input	Value	Rule
Competitive Pressure Index	57	Exact display inversion

The display stays 43. Room to Win is the exact inversion of the unchanged Competitive Pressure Index: $100 - 57 = 43$. It is not independently banded.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: Any future change to Competitive Pressure must produce an equal and opposite change here.

Practice Competitiveness: 61 / 100

Direction: Higher means better for the client.

Full precision: $10.00 + 13.00 + 13.00 + 9.75 + 9.75 + 5.00 = 60.50$. One final ROUND_HALF_UP step produces 61.

Component	Band/value	Weight	Contribution	Source IDs	Confidence
Visibility vs Peers	50	0.20	$50 \times 0.20 = 10.00$	DATAFORSEO_PREFLIGHT_20260730, GOOGLE_MAPS_FOCUS_SAMPLE_20260730	medium
Access / Booking vs Peers	65	0.20	$65 \times 0.20 = 13.00$	S02, S06, GOOGLE_MAPS_SAMPLE_20260730	medium
Review Trust vs Peers	65	0.20	$65 \times 0.20 = 13.00$	GOOGLE_MAPS_FOCUS_SAMPLE_20260730, BIRDEYE_AGGREGATOR_20260730	medium
Service-Line Differentiation	65	0.15	$65 \times 0.15 = 9.75$	S01, S03, S04, S05, S08, S09, S10	medium
Website / Conversion Clarity	65	0.15	$65 \times 0.15 = 9.75$	S01, S02, S03, S04, S05, S06	medium
Location Convenience	50	0.10	$50 \times 0.10 = 5.00$	S02, OSRM_FOCUS_GOOGLE_PINS_20260730	medium

The display changed from 58 to 61. The one dated same-page Google comparison moves Review Trust vs Peers from neutral 50 to bounded-supportive 65. Vintage shows 4.9 and 348 reviews on the peer card versus Focus at 4.8 and 182, Tri-County at 4.9 and 271, and Walmart Vision & Glasses at 3.5 and 8. All other bands remain unchanged. The sample is insufficient for an 80 band or a complete peer claim.

Component	Why this band changed or stayed	Limitation
Visibility vs Peers	No rank grid or complete stable query set exists.	The review observation is one dated page, not a complete export, text/theme analysis, response analysis, or outcome measure. Rank, live access, conversion, and patient-origin convenience remain unknown. The recommended 61 remains in the Mixed band.
Access / Booking vs Peers	The public hours, emergency access, CTA, and booking path remain supportive, while live completion and equivalent peer friction are unknown.	The review observation is one dated page, not a complete export, text/theme analysis, response analysis, or outcome measure. Rank, live access, conversion, and patient-origin convenience remain unknown. The recommended 61 remains in the Mixed band.
Review Trust vs Peers	The direct same-page comparison supports a bounded positive volume-and-rating read. The Birdeye discrepancy prevents treating aggregator counts as direct truth.	The review observation is one dated page, not a complete export, text/theme analysis, response analysis, or outcome measure. Rank, live access, conversion, and patient-origin convenience remain unknown. The recommended 61 remains in the Mixed band.
Service-Line Differentiation	Vintage publishes broad services and peers publish overlapping lanes. No new evidence changes this band.	The review observation is one dated page, not a complete export, text/theme analysis, response analysis, or outcome measure. Rank, live access, conversion, and patient-origin convenience remain unknown. The recommended 61 remains in the Mixed band.
Website / Conversion Clarity	Public service, provider, location, hours, and booking paths remain visible. Conversion remains unmeasured.	The review observation is one dated page, not a complete export, text/theme analysis, response analysis, or outcome measure. Rank, live access, conversion, and patient-origin convenience remain unknown. The recommended 61 remains in the Mixed band.
Location Convenience	The corrected route confirms a nearby peer but does not measure patient origins or trip tolerance.	The review observation is one dated page, not a complete export, text/theme analysis, response analysis, or outcome measure. Rank, live access, conversion, and patient-origin convenience remain unknown. The recommended 61 remains in the Mixed band.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: The review observation is one dated page, not a complete export, text/theme analysis, response analysis, or outcome measure. Rank, live access, conversion, and patient-origin convenience remain unknown. The recommended 61 remains in the Mixed band.

Client Opportunity: 54 / 100

Direction: Higher means better for the client.

Full precision: 12.20 + 10.00 + 10.00 + 7.50 + 9.75 + 5.00 = 54.45. One final ROUND_HALF_UP step produces 54.

Component	Band/value	Weight	Contribution	Source IDs	Confidence
Computed Market Demand-Supply	61	0.20	61 x 0.20 = 12.20	VALHALLA_20260730, ACS2024_BG, CDC_PLACES_2025, CENSUS_PEP_2025, MORTON709_FIRST_PARTY_ARCHIVE	medium
Competitive Pressure Opportunity	50	0.20	50 x 0.20 = 10.00	GOOGLE_MAPS_FOCUS_SAMPLE_20260730, S07, S08, S09, S10, S11, S12	medium
Practice Differentiation Upside	50	0.20	50 x 0.20 = 10.00	S01, S03, S04, S05, S08, S09, S10	medium
Access Fixability	50	0.15	50 x 0.15 = 7.50	S02, S06	medium
Digital Visibility Fixability	65	0.15	65 x 0.15 = 9.75	S01, S02, S03, S04, S05, S06, GOOGLE_MAPS_FOCUS_SAMPLE_20260730	medium
Execution Simplicity	50	0.10	50 x 0.10 = 5.00	S01, S02, S06	medium

The display stays 54. The required computed Market Demand-Supply input changes from 57 to 61, raising the full-precision total from 53.65 to 54.45. The rounded score remains 54 because 54.45 does not reach the .50 half-up threshold. Review evidence does not prove competitor weakness, leakage, capacity, conversion, or execution ownership, so the other component bands stay fixed.

Component	Why this band changed or stayed	Limitation
Computed Market Demand-Supply	The canonical formula uses the recomputed market result rather than a manual band.	Demand leakage, fixable competitor weakness, conversion, capacity, owner cadence, and execution capacity remain unknown. The score stays in the At Risk band.
Competitive Pressure Opportunity	Pressure exists, but no complete weakness cluster, leakage, or capacity-supported wedge is proven.	Demand leakage, fixable competitor weakness, conversion, capacity, owner cadence, and execution capacity remain unknown. The score stays in the At Risk band.
Practice Differentiation Upside	The offer is broad and lanes overlap. No new evidence establishes defensible ownership or unmet need.	Demand leakage, fixable competitor weakness, conversion, capacity, owner cadence, and execution capacity remain unknown. The score stays in the At Risk band.
Access Fixability	Public access exists, but access failure and recoverability remain unmeasured.	Demand leakage, fixable competitor weakness, conversion, capacity, owner cadence, and execution capacity remain unknown. The score stays in the At Risk band.
Digital Visibility Fixability	Existing surfaces and source discrepancies make measurement and reconciliation bounded actions, but no result is yet proven.	Demand leakage, fixable competitor weakness, conversion, capacity, owner cadence, and execution capacity remain unknown. The score stays in the At Risk band.
Execution Simplicity	The first actions remain bounded, but ownership and staff capacity are unknown.	Demand leakage, fixable competitor weakness, conversion, capacity, owner cadence, and execution capacity remain unknown. The score stays in the At Risk band.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: Demand leakage, fixable competitor weakness, conversion, capacity, owner cadence, and execution capacity remain unknown. The score stays in the At Risk band.

Digital Presence: 60 / 100

Direction: Higher means better for the client.

Full precision: 12.50 + 13.00 + 13.00 + 9.75 + 6.50 + 5.00 = 59.75. One final ROUND_HALF_UP step produces 60.

Component	Band/value	Weight	Contribution	Source IDs	Confidence
Findability	50	0.25	50 x 0.25 = 12.50	DATAFORSEO_PREFLIGHT_20260730, GOOGLE_MAPS_FOCUS_SAMPLE_20260730	medium
Reputation	65	0.20	65 x 0.20 = 13.00	GOOGLE_MAPS_FOCUS_SAMPLE_20260730, BIRDEYE_AGGREGATOR_20260730	medium
Bookability	65	0.20	65 x 0.20 = 13.00	S06, GOOGLE_MAPS_SAMPLE_20260730	medium
Site Quality	65	0.15	65 x 0.15 = 9.75	S01, S02, S03, S04, S05	medium
Content / Specialty Signal	65	0.10	65 x 0.10 = 6.50	S03, S04, S05, S08, S09, S10	medium
Social / Local Proof	50	0.10	50 x 0.10 = 5.00	S01, GOOGLE_MAPS_FOCUS_SAMPLE_20260730	medium

The display changed from 57 to 60. The direct same-page Google comparison moves Reputation from neutral 50 to bounded-supportive 65. Findability remains 50 because DataForSEO was unavailable and no rank grid ran. Bookability, Site Quality, Content / Specialty Signal, and Social / Local Proof remain unchanged.

Component	Why this band changed or stayed	Limitation
Findability	A dated Google observation is not a rank grid or complete query-coverage measure.	The review comparison is one dated page, not a complete peer export. Rank distribution, review recency and themes, responses, booking completion, performance testing, directory coverage, and local proof remain unknown. The recommended 60 remains Mixed.
Reputation	The same-page direct comparison supports a bounded positive read, while source discrepancies block a stronger or cross-platform claim.	The review comparison is one dated page, not a complete peer export. Rank distribution, review recency and themes, responses, booking completion, performance testing, directory coverage, and local proof remain unknown. The recommended 60 remains Mixed.
Bookability	The public CTA and Book online path remain visible. Completion and conversion are unmeasured.	The review comparison is one dated page, not a complete peer export. Rank distribution, review recency and themes, responses, booking completion, performance testing, directory coverage, and local proof remain unknown. The recommended 60 remains Mixed.
Site Quality	The site exposes services, providers, location, and hours. No new performance or conversion testing changes the band.	The review comparison is one dated page, not a complete peer export. Rank distribution, review recency and themes, responses, booking completion, performance testing, directory coverage, and local proof remain unknown. The recommended 60 remains Mixed.
Content / Specialty Signal	Dedicated specialty pages remain present, and peer overlap prevents a stronger ownership state.	The review comparison is one dated page, not a complete peer export. Rank distribution, review recency and themes, responses, booking completion, performance testing, directory coverage, and local proof remain unknown. The recommended 60 remains Mixed.
Social / Local Proof	No complete social activity, local links, community mentions, or directory comparison was collected.	The review comparison is one dated page, not a complete peer export. Rank distribution, review recency and themes, responses, booking completion, performance testing, directory coverage, and local proof remain unknown. The recommended 60 remains Mixed.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: The review comparison is one dated page, not a complete peer export. Rank distribution, review recency and themes, responses, booking completion, performance testing, directory coverage, and local proof remain unknown. The recommended 60 remains Mixed.

Dry eye / ocular surface: 53 / 100

Direction: Higher means better for the client.

Full precision: 13.00 + 5.25 + 9.75 + 7.50 + 7.50 + 5.00 + 5.00 = 53.00. One final ROUND_HALF_UP step produces 53.

Component	Band/value	Weight	Contribution	Source IDs	Confidence
Local Demand Fit	65	0.20	65 x 0.20 = 13.00	ACS2024_BG, CDC_PLACES_2025	medium
Competitive Gap	35	0.15	35 x 0.15 = 5.25	S08, S09	medium
Current Capability	65	0.15	65 x 0.15 = 9.75	S03	medium
Access / Capacity Fit	50	0.15	50 x 0.15 = 7.50	S03, S06	medium
Revenue / Reimbursement Potential	50	0.15	50 x 0.15 = 7.50	S03	medium
Referral Ecosystem Fit	50	0.10	50 x 0.10 = 5.00	S03	medium
Evidence Confidence	50	0.10	50 x 0.10 = 5.00	ACS2024_BG, CDC_PLACES_2025, S03, S08, S09	medium

The display changed from 52 to 53. Exact 5- through 30-minute 40-64, 65-plus, and diabetes context strengthens Evidence Confidence from 35 to 50. Local Demand Fit stays 65 because the evidence confirms a supportive demand proxy but does not establish search demand, referral density, conversion, or lane economics. The competitive, capability, capacity, revenue, and referral bands do not change.

Component	Why this band changed or stayed	Limitation
Local Demand Fit	Exact catchment age and diabetes proxies support the existing directional band, but do not establish realized lane demand.	No search-demand, capacity, referral, outcome, conversion, price, payer, collection, or margin evidence exists. The recommended 53 remains Research next.
Competitive Gap	Peers publish overlapping dry-eye offers, and no new complete lane audit changes the contested state.	No search-demand, capacity, referral, outcome, conversion, price, payer, collection, or margin evidence exists. The recommended 53 remains Research next.
Current Capability	Vintage publishes a dedicated service and modalities, while operating proof remains absent.	No search-demand, capacity, referral, outcome, conversion, price, payer, collection, or margin evidence exists. The recommended 53 remains Research next.
Access / Capacity Fit	Slots, staff, rooms, chair time, and follow-up capacity remain unknown.	No search-demand, capacity, referral, outcome, conversion, price, payer, collection, or margin evidence exists. The recommended 53 remains Research next.
Revenue / Reimbursement Potential	Price, payer, collections, and margin remain unknown.	No search-demand, capacity, referral, outcome, conversion, price, payer, collection, or margin evidence exists. The recommended 53 remains Research next.
Referral Ecosystem Fit	Relationships and referral density remain unknown.	No search-demand, capacity, referral, outcome, conversion, price, payer, collection, or margin evidence exists. The recommended 53 remains Research next.
Evidence Confidence	Direct recent catchment demand proxies resolve the prior city-only limitation, but market and operating proof remain incomplete.	No search-demand, capacity, referral, outcome, conversion, price, payer, collection, or margin evidence exists. The recommended 53 remains Research next.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: No search-demand, capacity, referral, outcome, conversion, price, payer, collection, or margin evidence exists. The recommended 53 remains Research next.

Myopia management: 53 / 100

Direction: Higher means better for the client.

Full precision: $13.00 + 5.25 + 9.75 + 7.50 + 7.50 + 5.00 + 5.00 = 53.00$. One final ROUND_HALF_UP step produces 53.

Component	Band/value	Weight	Contribution	Source IDs	Confidence
Local Demand Fit	65	0.20	$65 \times 0.20 = 13.00$	ACS2024_BG, MORTON709_FIRST_PARTY_ARCHIVE	medium
Competitive Gap	35	0.15	$35 \times 0.15 = 5.25$	S09, S10	medium
Current Capability	65	0.15	$65 \times 0.15 = 9.75$	S04	medium
Access / Capacity Fit	50	0.15	$50 \times 0.15 = 7.50$	S04, S06	medium
Revenue / Reimbursement Potential	50	0.15	$50 \times 0.15 = 7.50$	S04	medium
Referral Ecosystem Fit	50	0.10	$50 \times 0.10 = 5.00$	S04	medium
Evidence Confidence	50	0.10	$50 \times 0.10 = 5.00$	ACS2024_BG, MORTON709_FIRST_PARTY_ARCHIVE, S04, S09, S10	medium

The display changed from 52 to 53. Exact catchment child counts and observed Morton CUSD 709 enrollment growth strengthen Evidence Confidence from 35 to 50. Local Demand Fit stays 65 because the new evidence confirms family-demand support but does not establish search demand, willingness to pay, referrals, conversion, or follow-up capacity. All other component bands stay fixed.

Component	Why this band changed or stayed	Limitation
Local Demand Fit	Exact child counts and positive observed enrollment change support the existing family-demand band without proving realized myopia demand.	The school series has no observed 2023-24 value. Search demand, parent willingness to pay, capacity, referrals, outcomes, retention, conversion, and economics remain unknown. The recommended 53 remains Research next.
Competitive Gap	A peer publishes several myopia-control approaches, and no new lane-depth audit changes the contested state.	The school series has no observed 2023-24 value. Search demand, parent willingness to pay, capacity, referrals, outcomes, retention, conversion, and economics remain unknown. The recommended 53 remains Research next.
Current Capability	Vintage publishes a dedicated service. Starts, retention, outcomes, and capacity remain unknown.	The school series has no observed 2023-24 value. Search demand, parent willingness to pay, capacity, referrals, outcomes, retention, conversion, and economics remain unknown. The recommended 53 remains Research next.
Access / Capacity Fit	Follow-up capacity, chair time, staff skill, and protocols remain unknown.	The school series has no observed 2023-24 value. Search demand, parent willingness to pay, capacity, referrals, outcomes, retention, conversion, and economics remain unknown. The recommended 53 remains Research next.
Revenue / Reimbursement Potential	Price, payment, retention, collections, and margin remain unknown.	The school series has no observed 2023-24 value. Search demand, parent willingness to pay, capacity, referrals, outcomes, retention, conversion, and economics remain unknown. The recommended 53 remains Research next.
Referral Ecosystem Fit	School, pediatric, parent, and provider referral relationships remain unknown.	The school series has no observed 2023-24 value. Search demand, parent willingness to pay, capacity, referrals, outcomes, retention, conversion, and economics remain unknown. The recommended 53 remains Research next.
Evidence Confidence	Direct catchment and first-party school evidence resolve the prior city-only family proxy, while operating and referral proof remain incomplete.	The school series has no observed 2023-24 value. Search demand, parent willingness to pay, capacity, referrals, outcomes, retention, conversion, and economics remain unknown. The recommended 53 remains Research next.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: The school series has no observed 2023-24 value. Search demand, parent willingness to pay, capacity, referrals, outcomes, retention, conversion, and economics remain unknown. The recommended 53 remains Research next.

Specialty contact lenses: 51 / 100

Direction: Higher means better for the client.

Full precision: 10.00 + 7.50 + 9.75 + 7.50 + 7.50 + 5.00 + 3.50 = 50.75. One final ROUND_HALF_UP step produces 51.

Component	Band/value	Weight	Contribution	Source IDs	Confidence
Local Demand Fit	50	0.20	50 x 0.20 = 10.00	S05, ACS2024_BG	medium
Competitive Gap	50	0.15	50 x 0.15 = 7.50	S07, S08, S12	medium
Current Capability	65	0.15	65 x 0.15 = 9.75	S05	medium
Access / Capacity Fit	50	0.15	50 x 0.15 = 7.50	S05, S06	medium
Revenue / Reimbursement Potential	50	0.15	50 x 0.15 = 7.50	S05	medium
Referral Ecosystem Fit	50	0.10	50 x 0.10 = 5.00	S05	medium
Evidence Confidence	35	0.10	35 x 0.10 = 3.50	S05, S07, S08, S12	medium

The display stays 51. The new catchment, growth, routing, and review evidence does not establish contact-lens population, keratoconus burden, search demand, referral demand, complete specialty-depth competition, fitting capacity, outcomes, or economics. No component crosses a rubric band.

Component	Why this band changed or stayed	Limitation
Local Demand Fit	General demographics do not establish contact-lens or keratoconus demand.	Demand, specialty gap, fitting volume, success, chair time, capacity, referrals, pricing, remakes, payer mix, and margin remain unknown. The score remains Research next.
Competitive Gap	Peers publish contact-lens services, but equivalent specialty depth remains unknown.	Demand, specialty gap, fitting volume, success, chair time, capacity, referrals, pricing, remakes, payer mix, and margin remain unknown. The score remains Research next.
Current Capability	Vintage publishes specialty lens types and an offer, but operating proof remains absent.	Demand, specialty gap, fitting volume, success, chair time, capacity, referrals, pricing, remakes, payer mix, and margin remain unknown. The score remains Research next.
Access / Capacity Fit	Fitting availability, doctor time, staff skill, and room capacity remain unknown.	Demand, specialty gap, fitting volume, success, chair time, capacity, referrals, pricing, remakes, payer mix, and margin remain unknown. The score remains Research next.
Revenue / Reimbursement Potential	Pricing, payer, remakes, chair-time cost, and margin remain unknown.	Demand, specialty gap, fitting volume, success, chair time, capacity, referrals, pricing, remakes, payer mix, and margin remain unknown. The score remains Research next.
Referral Ecosystem Fit	Ophthalmology, optometry, and keratoconus referral flows remain unknown.	Demand, specialty gap, fitting volume, success, chair time, capacity, referrals, pricing, remakes, payer mix, and margin remain unknown. The score remains Research next.
Evidence Confidence	The public offer and general overlap remain the only lane-specific evidence. The new packets do not resolve lane demand or operations.	Demand, specialty gap, fitting volume, success, chair time, capacity, referrals, pricing, remakes, payer mix, and margin remain unknown. The score remains Research next.

What would move it: replace the named nulls or bounded samples with complete, reproducible evidence that crosses an approved 20 / 35 / 50 / 65 / 80 band. Weights and formulas do not change during this report.

Confidence: C: public-only directional evidence

Limitation: Demand, specialty gap, fitting volume, success, chair time, capacity, referrals, pricing, remakes, payer mix, and margin remain unknown. The score remains Research next.

Catchment values and method

Window	Population	Households	Under 18	Age 40-64	Age 65+	Diabetes
5 minutes	6,624	2,722	1,712	1,811	1,311	9.6%
10 minutes	19,322	7,873	4,571	5,843	4,291	10.9%
15 minutes	54,768	23,793	11,707	17,431	10,939	12.4%
20 minutes	173,058	75,244	38,652	53,102	32,473	13.2%
30 minutes	283,661	120,940	64,831	86,558	53,258	12.3%

These are area-weighted modeled catchment estimates, not patient counts and not a full VDU. Full VDU remains null.

Method: the origin is the direct Google listing pin for Vintage Optical. Corrected Valhalla auto-profile polygons define the 5, 10, 15, 20, and 30-minute windows. The polygons were intersected with 2024 TIGER Illinois block groups in EPSG:5070. Population, households, and age bands use 2024 ACS 5-year block-group estimates allocated by intersection area. Negative ACS sentinels remain null.

Income context uses a household-weighted mean of valid block-group median household incomes. It is an approximation, not a true catchment median and not actual payer mix. Diabetes context uses adult-population and tract-area weighted crude prevalence from the CDC PLACES 2025 release, 2023 data year.

The model has no live traffic or patient-origin evidence. Patient willingness to travel is unmeasured. The canonical six-term VDU also requires diabetes-prevalence-indexed population and commercial-pay-indexed population with complete frozen lineage. Those terms are incomplete, so canonical full VDU is null.

Source IDs: GOOGLE_MAPS_SAMPLE_20260730, VALHALLA_20260730, TIGER2024_BG, ACS2024_BG, CDC_PLACES_2025, and CATCHMENT_DEMOGRAPHICS_20260730.

Observed population and school series

Morton village population

Year	Morton village population
2020	17,172
2021	17,196
2022	17,361
2023	17,552
2024	17,555
2025	17,565

Derivation: $17,565 - 17,172 = 393$. Then $393 / 17,172 \times 100 = 2.2886093641\%$, displayed as 2.29%.

This is observed Morton village population change from 2020 to 2025. It is not catchment growth, forecast growth, patient growth, or realized demand. Source ID: CENSUS_PEP_2025.

Morton CUSD 709 enrollment

School year	Enrollment	Status
2022-2023	3,238	Observed
2023-24	missing	Not interpolated
2024-25	3,299	Observed
2025-26	3,365	Observed

Derivation: $3,365 - 3,238 = 127$. Then $127 / 3,238 \times 100 = 3.9221741816\%$, displayed as 3.92%.

The 2023-24 value is missing and not interpolated. Enrollment is an observed district proxy, not catchment population, forecast growth, patient growth, myopia starts, or realized demand. Source ID: MORTON709_FIRST_PARTY_ARCHIVE.

Candidate supply reconciliation

The NPPES city-and-taxonomy queries reported 40 results, while 39 provider candidate records materialized. Deterministic grouping produced 24 location candidates. The Census batch geocoder matched 21 and returned 3 no-match rows.

Window	Candidate locations	Competitor candidates	Canonical offices
5 minutes	4	2	null
10 minutes	4	2	null
15 minutes	8	6	null
20 minutes	16	14	null
30 minutes	20	18	null

Candidate counts are 4 / 4 / 8 / 16 / 20 across the five windows. Competitor-candidate counts are 2 / 2 / 6 / 14 / 18 after the directly supported subject-address exclusions.

These are coverage and contradiction counts. NPPES is a provider registry, not proof of active distinct offices. Repeated addresses, organizations, individual providers, ownership, current status, and service type are not completely resolved. One reported result did not materialize, three locations did not geocode, and the collection is not a complete 30-minute active-office sweep.

The canonical office count remains null. Population per office, full VDU per office, Supply Balance, Supply Saturation, and patient-choice denominators cannot be calculated from these candidates. Source IDs: NPPES_CURRENT_20260730 and CENSUS_GEOCODER_20260730.

Route, reputation, and visibility lineage

Corrected Focus route

The current route uses direct Google listing pins for Vintage Optical and Focus On Eyes. The frozen OSRM result is 233.4 seconds and 2,466.8 meters. The report displays $233.4 / 60 = 3.89$ minutes and 1.53 miles.

The direct-pin route supersedes the earlier candidate-geocoder lineage without repeating the stale values. The peer remains nearby, so no approved score band changes. The route has no live traffic, time-of-day adjustment, patient origins, patient choice, capacity, or draw evidence.

Source IDs: GOOGLE_MAPS_SAMPLE_20260730, GOOGLE_MAPS_FOCUS_SAMPLE_20260730, and OSRM_FOCUS_GOOGLE_PINS_20260730.

One bounded direct Google comparison

Entity	Direct Google rating	Direct Google reviews	Observation role
Vintage Optical	4.9	348	Peer card
Focus On Eyes	4.8	182	Direct listing
Tri-County Eye Center	4.9	271	Peer card
Walmart Vision & Glasses	3.5	8	Peer card

This is one dated same-page direct Google observation. The rank grid did not run, and this is not a complete peer export. No review text, themes, recency distribution, owner-response rate, conversion, outcomes, or clinical-quality inference is included.

Source-separated Birdeye discrepancies

Entity	Birdeye Google component	Direct Google	Difference
Vintage Optical	398	348	50
Focus On Eyes	210	182	28

Arithmetic: $398 - 348 = 50$ for Vintage Optical. $210 - 182 = 28$ for Focus On Eyes. Birdeye components are aggregator observations, not direct current Google counts. Aggregation dates and methods may differ. Ratings are not averaged, counts are not summed, and the cross-platform review total remains null.

DataForSEO status is unavailable_missing_credentials. request_sent is false. cost is 0. The rank grid status is not_run. Direct Google samples, Exa discovery, and Perplexity discovery are not equivalent to a rank grid.

Source IDs: GOOGLE_MAPS_FOCUS_SAMPLE_20260730, BIRDEYE_AGGREGATOR_20260730, and DATAFORSEO_PREFLIGHT_20260730.

What we do not know

The canonical office count remains null because provider-registry and candidate-location records are not a complete, current, classified, geocoded, and deduplicated active-office census.

Full VDU remains null because the six-term canonical formula lacks complete diabetes-indexed and commercial-pay-indexed inputs with validated lineage.

Complete provider entity dedupe remains null. The rank grid remains null and not run. Patient-origin choice, live traffic, conversion, capacity, outcomes, economics, actual payer mix, realized specialty demand, and a defensible cross-platform review total remain unknown.

These unknowns do not mean zero, average, normal, no demand, no competition, or no problem. They block office ratios, patient-choice claims, forecasts, revenue claims, capacity claims, outcome claims, and investment conclusions.

The report remains internal-only. External delivery, publishing, upload, CRM write, outreach, or any other external action requires human Project Room approval of the exact rendered package.
