

Vintage Optical

Morton, Illinois | Public-only directional evidence | Evidence reviewed 2026-07-30

The Read

Demand support improved, but the market still carries meaningful pressure. Vintage has a bounded review-trust advantage in one direct Google comparison. The right move is to measure visibility, reputation, and booking before committing spend.

Market Demand-Supply 61 / 100 Higher = more attractive	Competitive Pressure 57 / 100 Higher = more pressure	Room to Win 43 / 100 Higher = better	Practice Competitiveness 61 / 100 Higher = stronger	Client Opportunity 54 / 100 Higher = more actionable	Digital Presence 60 / 100 Higher = stronger

MODELED DRIVE-TIME CATCHMENT

Window	Population	Households	Under 18	Age 40-64	Age 65+	Diabetes
5 min	6,624	2,722	1,712	1,811	1,311	9.6%
10 min	19,322	7,873	4,571	5,843	4,291	10.9%
15 min	54,768	23,793	11,707	17,431	10,939	12.4%
20 min	173,058	75,244	38,652	53,102	32,473	13.2%
30 min	283,661	120,940	64,831	86,558	53,258	12.3%

Area-weighted modeled catchment estimates from corrected Valhalla polygons, 2024 TIGER block groups, 2024 ACS 5-year data, and CDC PLACES tract context. These are not patient counts. Full VDU remains null. No live traffic.

OBSERVED GROWTH AND NEARBY PRESSURE

Morton population 17,172 in 2020 to 17,565 in 2025: +393, +2.29%. Observed village change, not forecast or patient growth.	District enrollment 3,238 in 2022-2023 to 3,365 in 2025-26: +127, +3.92%. The 2023-24 value is missing and not interpolated.
Corrected Focus route 233.4 seconds, 3.89 minutes, 1.53 miles using direct Google listing pins. No live traffic; no score-band change.	Google comparison Vintage 4.9 / 348; Focus 4.8 / 182; Tri-County 4.9 / 271; Walmart 3.5 / 8.

One dated same-page direct Google comparison. The rank grid did not run, and this is not a complete peer export. Birdeye components remain separate and are not direct Google counts.

THREE PRACTICAL TESTS

Fix Card 1: Visibility baseline Owner: marketing lead First proof: approved query set and geographic rank-grid export. Cadence: baseline, then monthly. Decision: act only on repeatable query gaps. Kill rule: stop if geography or entity matching cannot be reproduced.	Fix Card 2: Reputation source control Owner: practice manager First proof: platform-specific counts, recency, and response baseline. Cadence: monthly source reconciliation. Decision: choose one measured response or review workflow. Kill rule: stop cross-platform totals without dedupe.	Fix Card 3: Booking completion Owner: operations owner First proof: non-PHI funnel numerator and final denominator. Cadence: weekly for 30 days. Decision: fix the highest verified drop-off. Kill rule: stop if capacity or ownership is unavailable.
--	---	--

What we do not know: canonical office count, full VDU, complete provider entity dedupe, rank grid, patient choice, live traffic, conversion, capacity, outcomes, economics, and a defensible cross-platform review total. Unknown stays null, not zero.
