

Where your next patient dollar is, and who else wants it.

Sample: two-location family + specialty practice · affluent suburban market · real analysis, details altered

WIN MORE

COMPETITIVE OPPORTUNITY SCORE

Not a grade. It shows where growth is easiest and what to fix first.

HIGHER = BETTER · 85+ DOMINATE · 70-84 WIN MORE · 55-69 VULNERABLE · <54 AT RISK

THE READ

This market is crowded: room to win is just **37** and **23** out of 100. Your opportunity is still **74** because the demand is rich, competitors are weak where it matters, and four revenue lanes sit open. A tight market with open lanes is exactly where growth comes from: not everywhere, lane by lane.

1

YOUR MARKET

Demand is not your problem. 100k+ residents in your service area, and the profile is ideal.

\$120k+

MEDIAN HH INCOME
vs ~\$75k US median. Funds premium optical + cash-pay care.

20%+

CHILDREN UNDER 18
Myopia management + family exam demand.

15%+

AGE 65+
Medical eye care, dry eye, chronic-condition exams.

25%+

WORK FROM HOME
Near-home weekday visits beat commuter capture.

2

YOUR COMPETITION

Competitors are winning patients on convenience, not on care.

ROOM TO WIN BY LOCATION · HIGHER = BETTER

Location A · anchor office **37** TIGHT

Location B · growth office **23** VERY TIGHT

Room to win, 0-100, higher = better. Low room = crowded market. The lanes below are where you win anyway.

TIER 1	Established private ODs	competing on your specialty terrain: dry eye, myopia
TIER 2	National retail optical	top-rated profile, frictionless online booking
TIER 2	Corporate OD chains	walk-ins, real-time booking, retail pricing
TIER 2	Regional ophthalmology groups	medical gravity, surgical referral engines

The wedge: competitor reviews show scheduling runaround, long waits, and billing confusion. Your reviews praise caring staff and doctors who explain. That gap is winnable revenue.

3

YOUR OPPORTUNITY

Four revenue lanes, ranked by what you can realistically win.

1	Appointment fill + recall recapture Open slots + lapsed recalls, e.g., 8 recovered exams/wk × \$170 avg visit ≈ \$71k/yr.	FASTEST LEVER		\$60-150k est. per year · directional
2	Dry eye + ocular surface High senior + screen-time demand; no local competitor clearly owns the lane.	86 OWN THE LANE		\$50-120k est. per year · directional
3	Myopia management 20%+ children + affluent parents; myopia typically starts ages 6-14.	84 OWN THE LANE		\$40-100k est. per year · directional
4	Specialty contact lenses Scleral + keratoconus fittings: a moat retail chains cannot copy.	79 BUILD + TEST		\$30-80k est. per year · directional

12 service lanes scored in the full analysis · top four shown

Combined directional upside **\$180-450k / yr** PUBLIC-DATA ESTIMATE

FIRST 30 DAYS

01

Location B fill sprint

Track open slots, recalls, and web/phone conversion by location. Recapture lapsed patients first.

02

"No runaround" campaign

Position directly against competitor pain: easy booking, clear answers, glasses without the wait.

03

Route service lines by office

Each location owns distinct lanes: myopia + specialty lenses at A, dry eye + medical at B.
