

Vintage Optical: measure the lanes before scaling them.

Competitive Growth Analysis for Vintage Optical, 605 S Main St, Morton, Illinois. [S01](#) [S02](#) [N00](#)

54

/ 100

CLIENT OPPORTUNITY

HIGHER = BETTER

Public data · Confidence C [S14](#) [S16](#)

THE READ

Room to Win is tight at 43, while Client Opportunity is 54, Practice Competitiveness is 58, and Digital Presence is 57; every displayed score uses higher = better. [S01](#) [S06](#) [S16](#) The scores diverge because Vintage already publishes broad services and a booking path, while complete local supply, peer reputation, access conversion, capacity, and economics remain unmeasured. [S01](#) [S06](#) [S16](#) The action is lane by lane: establish conversion, access, and channel baselines before making growth claims. [S03](#) [S04](#) [S05](#)

1

YOUR MARKET

Supportive city context, incomplete catchment proof.

Morton city data supports a mixed demand read, but city values do not describe the 20-minute drive-time catchment. [S14](#) [S15](#)

57 / 100

MARKET DEMAND-SUPPLY

Higher = better · mixed · public-only method. [S14](#)

17,557

2024 CITY ESTIMATE

City context only. [S14](#)

25.9%

UNDER AGE 18

Directional family-demand proxy. [S14](#)

23.1%

AGE 65 OR OLDER

Directional age-demand proxy. [S14](#)

2

YOUR COMPETITION

Nearby choices are real; total supply is still unknown.

Room to Win [R01](#) [R05](#)

43 / 100 higher = better

Practice Competitiveness [S01](#) [S06](#)

58 / 100 higher = better

Known routed alternatives are a bounded peer set, not a complete supply census or patient-origin choice set. [R03](#) [R04](#)

TIER 1

Focus On Eyes

Direct Morton peer, 4.07 routed minutes. [S07](#) [R01](#)

TIER 1

Tri-County + VCC

Regional peers with dry-eye or myopia overlap. [S08](#) [S10](#)

TIER 2

Bard + Illinois Eye

Retail and medical-surgical substitutes. [S11](#) [S12](#)

A complete office and provider census could move Room to Win materially in either direction. [R03](#) [R04](#) Public peer pages prove stated services, not utilization or patient draw. [S08](#) [S09](#) [S12](#)

3

YOUR OPPORTUNITY

Three existing specialty lanes are research-next, not forecasts.

57 / 100

DIGITAL PRESENCE

Higher = better · mixed · Confidence C

The site publishes service pages and a booking flow; findability, reputation, and social proof lack peer-normalized baselines. [S01](#) [S06](#) [S16](#)

Dry eye / ocular surface

Existing offer plus city age proxy; direct peer overlap constrains the gap. [S03](#) [S08](#) [S09](#)

52 / 100

higher = better

RESEARCH NEXT

Myopia management

Existing offer plus city child-share proxy; a regional peer publishes overlap. [S04](#) [S10](#) [S14](#)

52 / 100

higher = better

RESEARCH NEXT

Specialty contact lenses

The public offer is verified; demand, competitive gap, capacity, and economics are not. [S05](#) [S07](#)

51 / 100

higher = better

RESEARCH NEXT

Unknown until measured: all volume, conversion, capacity, collection, and economics inputs. [S03](#) [S04](#) [S05](#) [S06](#) Public pages verify offers and access paths, not starts, completed visits, throughput, or financial performance. [S03](#) [S04](#) [S05](#) [S06](#)

First 30 Days

Exactly three GROW Fix Cards · measured baselines before growth claims

F-001 · SPECIALTY CONVERSION

CONFIDENCE: HIGH

Tag the three existing lanes.

ACTION: build a 30-day table for dry eye, myopia, and specialty contacts before adding services or claiming lane ownership. [S03](#) [S04](#) [S05](#)

OWNER: practice staff · 30 days · no dependency

MATH: inquiry-to-book = booked evaluations / inquiries; book-to-start = starts / booked evaluations; completion = completed plans / starts.

PROOF: one table shows inquiries, booked evaluations, starts, completions, available slots, and an owner for every lane; missing counts stay null.

[S06](#)

F-002 · ACCESS DIAGNOSTIC

CONFIDENCE: HIGH

Measure the access gap.

ACTION: track calls, booking attempts, live slots, cancellations, no-shows, and requests without an acceptable slot before changing hours or staffing. [S02](#) [S06](#)

OWNER: practice staff · 30 days · no dependency

MATH: access gap = unanswered or abandoned calls + incomplete booking attempts + requests without acceptable slots; gap rate = access gap / total access attempts.

PROOF: the 30-day table reports call disposition, booking completion, next available slot by visit type, cancellations, no-shows, and unmet requests.

[S16](#)

F-003 · CHANNEL BASELINE

CONFIDENCE: MEDIUM

Audit listings and source flow.

ACTION: reconcile the current address across tracked surfaces, correct only observed mismatches, and baseline reviews, referrals, and recall before broader awareness work. [S01](#) [S02](#) [S16](#)

OWNER: practice staff · 30 days · no dependency

MATH: listing accuracy = correct tracked listings / tracked listings; review velocity = new verified reviews / 30 days; referral or recall book rate = booked / eligible inquiries or contacts.

PROOF: a dated audit logs the address on each surface, records corrections only when found, and includes 30-day review, referral, and recall counts with owners.

[N00](#)

Review the evidence boundary before using this analysis.

Project Room is empty, so this remains an internal public-data draft. No external delivery or action is authorized.

[Book a MyBCAT working session](#)

Method: public-only, manual directional bands with high-good client scores and Confidence C; official pages support identity, published services, hours, and booking paths; Census supports city context; stored OSRM links support point-to-point route observations. [S01](#) [S02](#) [S14](#) [R01](#)

Limits: Morton city demographics are not a drive-time catchment; routed peers are not a complete supply census; the dated Maps result is not a peer-normalized reputation export; published offers do not prove conversion, capacity, outcomes, or economics. [S15](#) [S16](#) [S08](#) [S09](#)
